Fruit Bat Flight Model

johnmuirlaws.com

Some Assembly Required...

1. Print this page on to card stock paper. Regular paper is OK but stiff card stock will be much better!
2. Cut out bat the shape along its outline.
3. Fold valley and mountain folds as indicated. A mountain folds makes a raised crease with the two sides sloping down, away from the fold. A valley fold makes a crease at the bottom , with the two sides sloping up, away from the fold.

   Mountain Fold
   Valley Fold

4. Cut out the space between the legs, leaving the corner of the feet attached. This is most easily done when the bat is folded.
5. Pinch the two sides of the head together and connect them with a small piece of tape below the head and over the snout.
